

09th March 2021

Notice to deprecate API endpoints on Port 81

Hivedome will be deprecating the API endpoints currently on port 81 by the third quarter of 2021.

Background

Over the next few months, we will be looking at making some improvements to ITAS Events and the ITAS API. This will involve the deprecation of API v1.0 and all endpoints currently accessed via port 81. Improvements will include the addition of https security and the consolidation of events endpoints into one Webservice.

Requirements

Many of these endpoints have already been replicated and made available in the latest version of the ITAS API which can be accessed via port 5720, but we request that you provide us with details of any endpoints you might be using in API v1.0 so that we can ensure that all those required are made available in the latest version and that we can support your move to these new end points before port 81 is removed.

For more information or assistance with this install, please contact your ITAS representative or support team.
