## Notice to deprecate API endpoints on Port 81 - Update

Hivedome will be deprecating the API endpoints currently on port 81.

### Background

Back in March 2021 we sent notification that the API v.1.0 accessed via port 81 would be deprecated and replaced by a new Events webservice that would be accessed via port 5710:

‘Over the next few months, we will be looking at making some improvements to ITAS Events and the ITAS API. This will involve the deprecation of API v1.0 and all endpoints currently accessed via port 81. Improvements will include the addition of https security and the consolidation of events endpoints into one Webservice.’

Since making this announcement, Hivedome have reviewed the requirements for this change, and although we plan to continue with the transition, there have been some changes made to our approach.

The previous plan would have involved the introduction of a new ITAS-Events database that would have required the migration of subscriber records, subscriptions, topics etc. from the existing events database. To avoid any possible complications associated with those changes, the transition has now been simplified, requiring just the following:

- Update to trader desktop config
- Update to itascomapp.config
- Update to url used by middleware/integration

This new approach will ensure that the existing events database will continue to be utilised removing the requirement for any database migrations.

For more information on the enhancement of the Events API, please see the link below:

[Events API v2 – ITAS Help](#)

### Requirements

As previously requested, Hivedome require the below details:

‘Many of these endpoints have already been replicated and made available in the latest version of the ITAS API which can be accessed via port 5710, but we request that you provide us with details of any endpoints you might be using in API v1.0 so that we can ensure that all those required are made available in the latest version and that we can support your move to these new end points before support for port 81 is removed.’

Hivedome will no longer support port 81 after January 2023. We are therefore aiming to switch all sites to port 5710 before this time.

***For more information or assistance with this matter, please contact your ITAS representative or support team.***
